

Peugeot E-3008: Chat-GPT on board

Von Walther Wuttke

Peugeot has completely redesigned its best-selling 3008 and is initially launching it as a fully electric version. The E-3008 is the brand's first model to use the Stellantis Group's new STLA-Medium platform, which should enable a range of up to 700 kilometers. The 210 hp (157 kW) version will initially be available at dealerships. The models with hybrid drive and the more powerful variants will follow. In future, the series will be supplemented by versions with a long range (230 hp/170 kW) and all-wheel drive (320 hp/240 kW) as well as hybrid drive (136 hp/100 kW).

The E-3008 is also the first vehicle from the lion brand to be launched on the market with the Chat-GPT AI app, which answers virtually all questions while driving at the command "OK Peugeot" - from navigation to points of interest along the route. The first vehicles will be in dealerships in the coming weeks. Customers will then have the choice between two trim levels, Allure and GT, which can be supplemented with additional packages. The price list for the E-3008 starts at 48,650 euros. (aum)
