

## The Citroën ë-C3 covers over 300 kilometers

Citroën is launching the ë-C3 on the market in early summer and has now announced the official range of the electric car, which is available from 23,300 euros. According to the WLTP standard, it is up to 326 kilometers. The manufacturer describes the small car as having the best price/range ratio on the market. The two equipment versions You and Max (from 27,800 euros) will be offered initially.

Even the entry-level version comes with electric exterior mirrors, automatic headlights, LED headlights, cruise control, Bluetooth hands-free kit, lane departure warning, traffic sign recognition and auxiliary heating with pre-entry climate control. The top-of-the-range model comes with a reversing camera, 10.25-inch touchscreen, tinted windows and other features. Versions have an optional eleven kW onboard charger instead of the standard 7.4 kW. There is also a winter package with heated seats, steering wheel and windscreen.

The Citroën ë-C3 is powered by an 83 kW (113 hp) engine. It accelerates the car from 0 to 100 km/h in around eleven seconds. The top speed is 135 km/h. The battery can be recharged from 20 to 80 percent in around 26 minutes at a fast-charging station with up to 100 kilowatts. A particularly comfortable suspension typical of the brand is also promised. A head-up display replaces the traditional instrument cluster. Vehicle information is projected onto a shiny black area between the upper edge of the dashboard and the lower edge of the windscreen.

Another version of the ë-C3 will follow next year for short-distance drivers, which will only offer a range of up to 200 kilometers, but will also be available for 19,990 euros. (aum)
